SAP® Business One for the Footwear Industry.

Integrate and automate critical business processes with Apparel & Footwear for SAP Business One

Due to rapidly changing tastes of shoe buyers, it is important for shoemakers to continually offer better and bolder product lines to catch the consumer's eye. It means offering smart, fashion-forward designs.

These companies are usually small and compete on the basis of superior designs, whether they are athletic, casual or formal.

Companies that succeed in margin trends and inventory management tend to be the best run and, thus, are more likely to stay ahead of fashion trends and remain competitive in the marketplace. You also act just as as quickly when you have got all of your business information at your fingertips.

The SAP® Business One application and Apparel, Footwear & Accessories vertical solution gives you just that. You can easily access your company's data from one place, in real time, with familiar tools and reports. You can see sales, operations, and financial data, wherever you are, day or night.

Discover how you can integrate and automate manufacturing, supply chain, sales, and financial processes, a complete view of your business.

The solution will better enable brands to manufacture their products and sell them to retailers and consumers using one single, vertical solution.

Apparel & Footwear for SAP Business One has everything a small to midsize apparel manufacturer or importer needs.

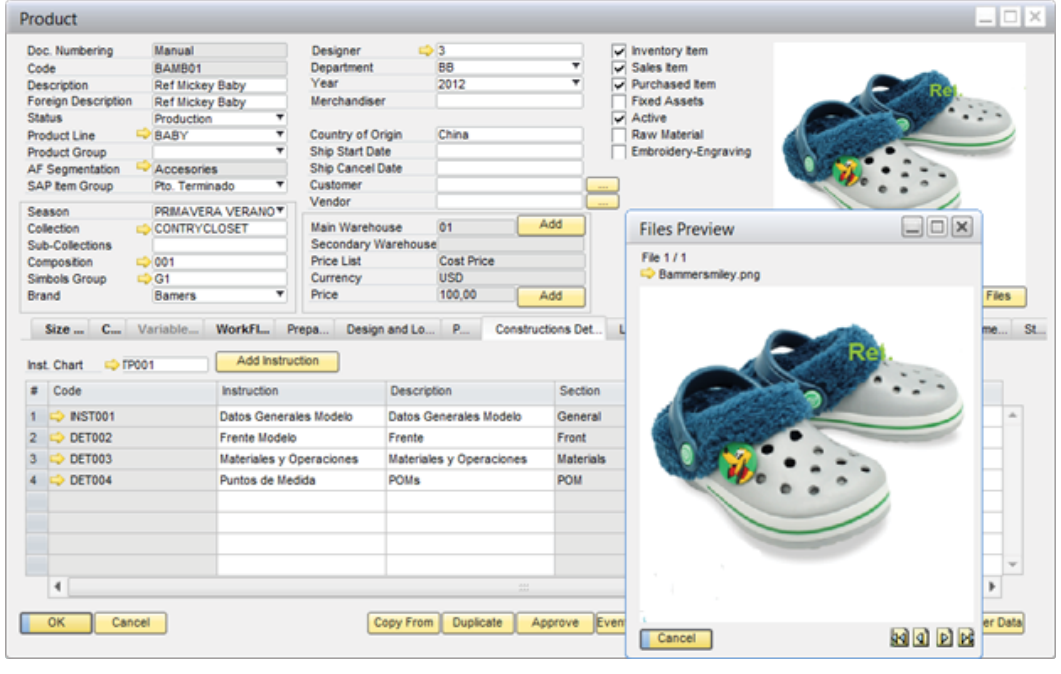
Product Data Management (PDM).

Product Data Management application is for product-centric businesses that need to maintain, store, and use large amounts of product-related data across the company processes.



Manage Images, Colors, Materials and POMs. Sketches, concepts, documentation and images can be added to the style from a file or an existing drawing tool. Manage raw materials and labor costs Once the style cost and pricing are approved, generate SKU information directly from the product data management.

Product Lifecycle Management

Compressing the cycle time from idea to revenue generation has become a prerequisite to successful Product Lifecycle Management (PLM). Increasingly, apparel and footwear industry leaders are taking a comprehensive view of product development and sales that helps identify opportunities for reducing cycle times. In order to reduce the time and promote stock rotation, companies need an integrated process in which they control the entire design, manufacturing and sales process.
