Benefits

Enhance business opportunities allowing clients and vendors to interact directly with your system

If your **OnePortal** is available on the Internet, you can let your clients or vendors access it. According to the authorizations you provide them, you can let them interact with marketing documents or their BP Master Data.

When clients log into OnePortal you may let them create, modify or cancel sales documents on their behalf. You may also let your vendors access OnePortal to review their purchase documents and give your company offers.

Benefits

Save money with a cheaper Licensing schema

OnePortal can communicate with the SAP database using the DI API, DI Server, or the SAP Integration Framework. This software architecture requires a different license schema compared with the SAP Business One application, significantly reducing the amount of money invested in licenses.

When using the **SAP Business One** Application a specific license is needed per user according to the modules required by that user.

When working with **OnePortal**, your new license schema will depend on the communication method you choose, always resulting on a cheaper solution compared with the traditional **SAP application schema**.

Main Features

Purchasing

Let your purchasing department work entirely with OnePortal creating, viewing, modifying or closing purchasing documents such as Purchase Requests, Quotations, Orders and Invoices.

Provide your vendors with access to those purchasing documents associated to them. Let them review and modify these documents to provide your company with accurate information and special offers.

Control document creation using approval procedures. Let managers log into OnePortal and approve purchase requests or purchase orders created by employees on the purchase department; let them also approve purchase quotations created by your vendors.

Sales

Let your sales department work entirely with OnePortal creating, viewing, modifying or closing sales documents such as Sales Quotations, Orders and Invoices. Provide your clients with access to those sales documents associated to them. Let them create and review these documents to increase sales opportunities.

Control document creation using approval procedures.

Let managers log into OnePortal and approve sales orders created by employees on the sales department; let them also approve sales orders created by clients.

The screenshot displays the 'Sales Orders' module in the OnePortal system. At the top right, there are navigation links for 'Sales', 'Web Portal', and a user profile icon labeled 'facilita'. The main heading is 'Sales Orders'. Below this is a 'Search' section with input fields for 'Customer Code', 'Customer Name', 'Document Num.', and 'Date'. There are two green search buttons: 'Search Customer' and 'Search'. A checkbox labeled 'All Documents' is also present. Below the search section is a 'Sales Order List' table. The table has columns for '#', 'Date', 'Customer Code', 'Customer Name', 'Remarks', and 'Due Date'. The current state of the table shows 'No Data to Display'.

#	Date	Customer Code	Customer Name	Remarks	Due Date
