Summary

# Product Data Management (PDM).

Product Data Management application is for product-centric businesses that need to maintain, store, and use large amounts of product-related data across the company processes.

Manage Images, Colors, Materials, POMs. Sketches, concepts, documentation and images can be added to the style from a file or an existing drawing tool. Manage raw materials and labors for costing. Add Point of measures based con templates. Once the style cost and pricing are approved generate SKU information directly from the product data management.
